    printf("Hej!\n");
```

Programming has been a natural part of my life since I was around 16, when I built a prototype PHP text-based browser game during upper secondary school. Today, I am in the fifth and final year of my Master of Science in Computer Engineering with a focus on Artificial Intelligence at Halmstad University.

Before reaching this point, my learning largely came from building things myself, testing ideas in practice, and understanding how systems work. That curiosity led me to Minecraft, where I founded and operated the KingConquest network with multiple servers, working together with another developer. During that time, I created the Conquest plugin, which became my way into Java and gave me hands-on experience with asynchronous programming, databases, text parsing, plugin development, and technical ownership.

Alongside my studies, I worked as a Junior Developer at HMS Networks in their OS team, where I developed a process monitoring system in Embedded C for embedded Linux environments. I also completed my bachelor's thesis at Axis Communications, where I developed a C application for Raspberry Pi using Meson and worked directly with DSP, audio processing, and noise reduction for intercom systems. I am currently conducting my master's thesis in collaboration with Ericsson, where I am developing an AI-driven pipeline in Unity for generating realistic avatar motion based on semantic understanding and 3D data, including Unity, C#, Python, LLM, AI, point cloud data, client-server communication, motion generation, and system integration.

In my spare time, I continue to build projects mainly because I enjoy learning, including Politics of Today, where I am experimenting with AI, and CCHAT, where I am deepening my understanding of client-server systems, sockets, Linux, and asynchronous programming. I bring strong technical curiosity, a hands-on way of learning, and a genuine interest in building practical systems, and I enjoy moving between high-level design and low-level implementation.

Kind regards,
Thomas Lundqvist
